Quantitative Fluorescent in situ
hybridization (Q-FISH) is a
cytogenetic technique based on
the traditional FISH and Genetic
methodology. In Q-FISH, the
technique uses labelled (Cy3 or
FITC) synthetic DNA mimics
called peptide nucleic acid (PNA)
oligonucleotides to quantify
target sequences in chromosomal
DNA using fluorescent
microscopy and analysis
software. Tue, 12 Jun 2018

Y chromosome become so small
relative to its X counterpart? This
animation depicts the
300-million-year odyssey of the
sex chromosomes that began

BioInteractive - DNA is tightly
packed in the nucleus of every
cell. DNA wraps around special
proteins called histones, which
form loops of DNA called
nucleosomes. These nucleosomes
coil and stack together to form
fibers called chromatin. Wed, 20
